Backstay - Clamp

This **backstay clamp** allows you to connect the GTO-15 high-voltage-cable to the insulated backstay safe from dampness. Attempts to fix the feeder with the help of hose clips or ordinary cable clamps will result in a provisional solution, since ingress of moisture would be inevitable. Our **backstay clamps** are designed for 8 – 11mm backstays (stainless steel) and for 11 – 16mm backstays (brass). We recommend using GTO-15 high-voltage-cable as a feeder.
